feedback

[↗](#) billing

[↗](#) list_invoices

This tool allows retrieving invoices for Amazon advertising accounts. The tool fetches invoices across an advertiser account, allowing an account to access comprehensive invoicing and charges summary. It provides detailed invoicing information for the account such as the invoice amounts, fees, due dates, the payment method for the invoice, payment terms, invoice status etc. It supports flexible filtering by start and end dates and the status of invoices. The tool should be invoked without setting the invoiceStatuses parameter to fetch all invoices for an advertiser account. If just unpaid invoices or charges need to be fetched for the account, then the tool should be invoked with invoiceStatuses being ISSUED and PAID_IN_PART

[🔗 query_billing_notifications](#)

This tool allows retrieving comprehensive billing notifications for Amazon advertising accounts. The tool provides a comprehensive set of billing-related notifications for an advertiser account, enabling advertisers to understand the billing status for their accounts. These notifications also cover various billing scenarios such as payment method issues, billing profile problems, account suspension related issues, tax registration status, payment failures etc. The notifications are aggregated by their type and list the advertiserMarketplaces (i.e., the marketplaces/countries in which this notification is applicable), providing a consolidated view of billing

ALERT (critical problems requiring immediate action).
